

SVT LED Street Lights Vs. Sodium and Metal Halide lamps. Color Temperature, CRI (color rendering index) and Glare

A. SVT Led Street Lamps

The SVT lamps show little or no glare. The Color temperatures are very satisfactory to the eye. Gives object colors a very natural look.

B. Metal Halide Lamps

Illuminated light has a very strong glare, and color temperatures are too high. The object colors appear very unnatural. Light seems to make people irritable and depressed.

C. Sodium Lamps

Illuminated light appears to have a very strong glare. The color temperature is too low. Illuminated light appears orange in color. Object colors are not natural looking. It seems to give a hypnosis effect.
